

Pear Shaped Links

Robust, Reliable, Safe

AQUALINK Pear Shaped Links are crafted with precision. Forged from high-grade steel and hot-dip galvanized, they are built to last in a marine environment.

Certified according to the NS-9415:2009 standard, our Pear Shaped Links meet stringent quality requirements.

The unique design of our Pear Shaped Links ensures consistent shape maintenance even under major stress. This design also minimizes movement and wear at the contact surface between the Pear Shaped Link and shackle, promoting longevity and efficient operation.

We offer Pear Shaped Links in a range of sizes to cater to various needs, with Minimum Breaking Load (MBL) from 45T to 101T. This flexibility allows for tailored solutions to meet specific mooring line requirements.

The Pear Shaped Link is designed for optimal adaptation between different components in a mooring line. This ensures seamless integration and increased efficiency, helping to streamline operations.
